A Revised Bibliography of Strip-Mine Reclamation

DAVID T. FUNK

Since 1953, when Limstrom published his bibliography of strip-mine reclamation (number 98 in this list), more than 90 new papers on the subject have appeared. We have compiled these, and since Limstrom's bibliography is now out of print, we also included the technical citations from it.

Two additional bibliographies have been published, one by Bowden (8), and one by Knabe (81). The former was very useful for checking references to be included in this list. Moreover, it contains a number of references on geology, acid mine drainage, and the use of spoil banks by wildlife that are not repeated here. Knabe's bibliography covers the European literature thoroughly, particularly German journals. It also includes papers from France, Great Britain, Austria, Poland, Soviet Union, and Hungary and provides useful cross-reference sections. Therefore, we omitted foreign-language literature from our bibliography except for references that have appeared since Knabe's list was completed.

We would appreciate being notified of any errors in this list and also would be glad to know of any publications that were omitted and should be included in a future supplement.
